

Factsheet 2021

Products

As Procurement, Technology and Real Estate Center of the Federal Department of Defence, Civil Protection and Sport DDPS, armasuisse is responsible for the development, evaluation, procurement and disposal of systems, equipment of the armed forces and other customers, as well as for the planning and management of DDPS real estate. Within the administrative reform process the procurement activities are extended: armasuisse becomes one of four federal procurement competence centers.

Buildings and facilities:	7,000

Basics

armasuisse operates an integrated management system and is certified acc. to ISO-Standards 9001 (quality) and 14001 (environment). armasuisse does business in a process-oriented manner and with SAP uses an instrument permitting transparent cost accounting.

Procurement

The procurement sector - consisting of the competence sectors «**Command and Control and Reconnaissance Systems**», «**Aeronautical Systems**», «**Land Systems**», as well as «**Purchasing and Cooperations**» - is the reliable and efficient partner for a great variety of procurements. The four competence sectors are responsible for the active participation in the customers' planning process, the strategic procurement and sales management, the operational realisation of evaluation, procurement, sale and disposal, and for support during the utilisation and servicing phases.

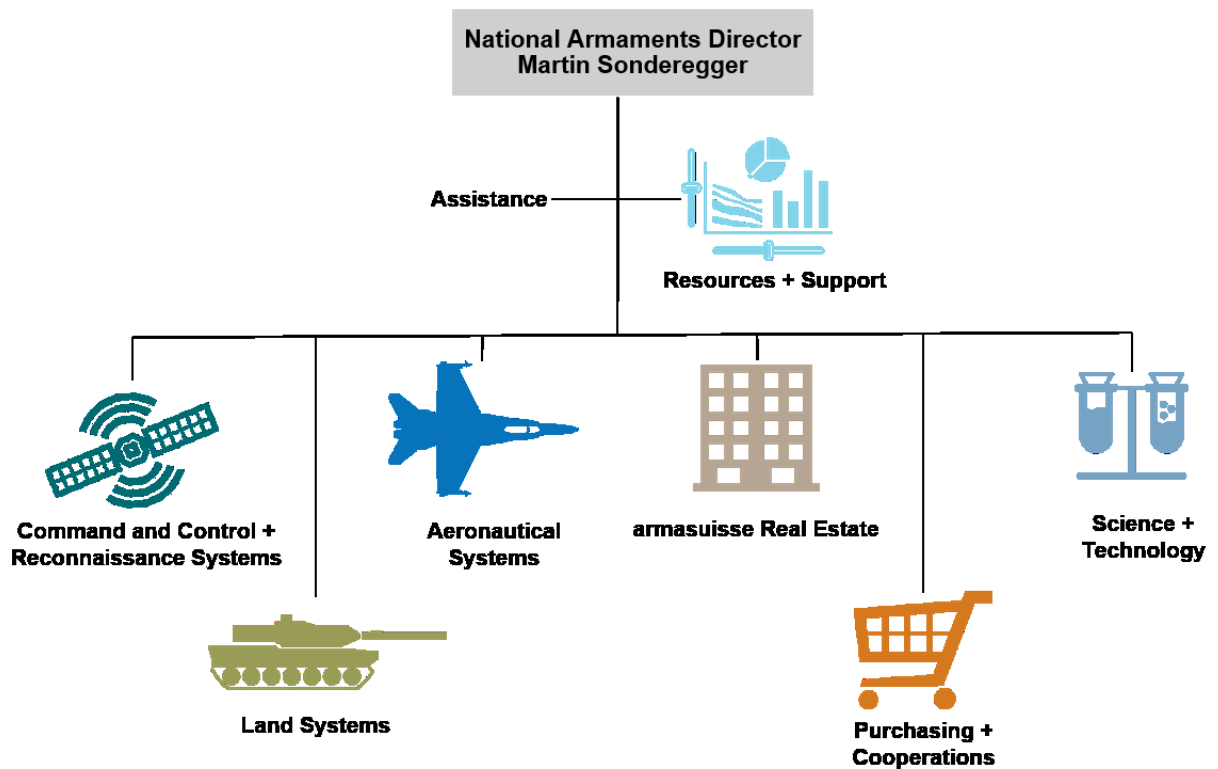

Science + Technology

The Science and Technology competence sector S+T consists of the specialist departments of Sensor Technology, Communication and Electromagnetic Protection, Cyber Defence and Information, Test Centres, Research Management, Model Design and Simulation, Explosive Materials and Ammunition Monitoring. S+T tests and evaluates the operational capability, functionality and efficiency as well as the security requirements of current and future systems of the Swiss Armed Forces and other customers. S+T makes every effort to ensure that customers can make conscious technology decisions, minimise investment risks and are informed about future technologies.

Real estate management

armasuisse Real Estate, the center of competence for real estate within the DDPS, is responsible for the overall management of 24,000 hectares of property and 7,000 objects for the Federal Department of Defence, Civil Protection and Sport DDPS. Within the wide-ranging portfolio armasuisse Real Estate is responsible for implementing and planning existing and future customer needs, the management of objects in military use, the realisation of new developments and reconstructions, and for the sale and liquidation of infrastructure which is no longer needed.
